

*******Enable postgresql service*******

Step01:- Locate the postgresql.service file. It is usually located in the /usr/lib/systemd/system/ directory.

Step02:-Open the postgresql.service file using a text editor:

```
sudo vi postgresql.service
```

Step03:-Inside the file, find the [Unit] section, and add the following line to enable the service at boot:

```
WantedBy=multi-user.target
```

Step04:-To ensure the changes take effect, reload the systemd daemon:

```
sudo systemctl daemon-reload
```

Step05:-

```
sudo systemctl enable postgresql-14.service
```

Step06:-

```
sudo systemctl start postgresql-14.service
```
